## INTRODUCTION

The proposed Brentwood Subdivision is located in the Southwest portion of St. Tammany Parish, near Mandeville (see **Figure 1**). The site is located near the intersection of Sharp Rd. and Westwood Dr. (see **Figure 2**). The roadway that will be impacted by the development is Sharp Rd., it is a two-lane asphalt road with a 35-mile per hour speed limit. The proposed development will have one entrance/exit on Sharp Rd. The traffic impacts associated with the proposed development are determined by comparing existing and future level of service (LOS) of nearby intersections with the project. The major tasks performed include counts of existing traffic, generation of project traffic, estimation of non-project traffic growth, and intersection LOS analysis. The study analysis area consists of the existing intersections of Sharp Rd. @ Asbury Dr., Sharp Rd. @ Hwy. 59, and Sharp Rd. @ Project Entrance/Exit.

## PROPOSED PROJECT

### Project Description

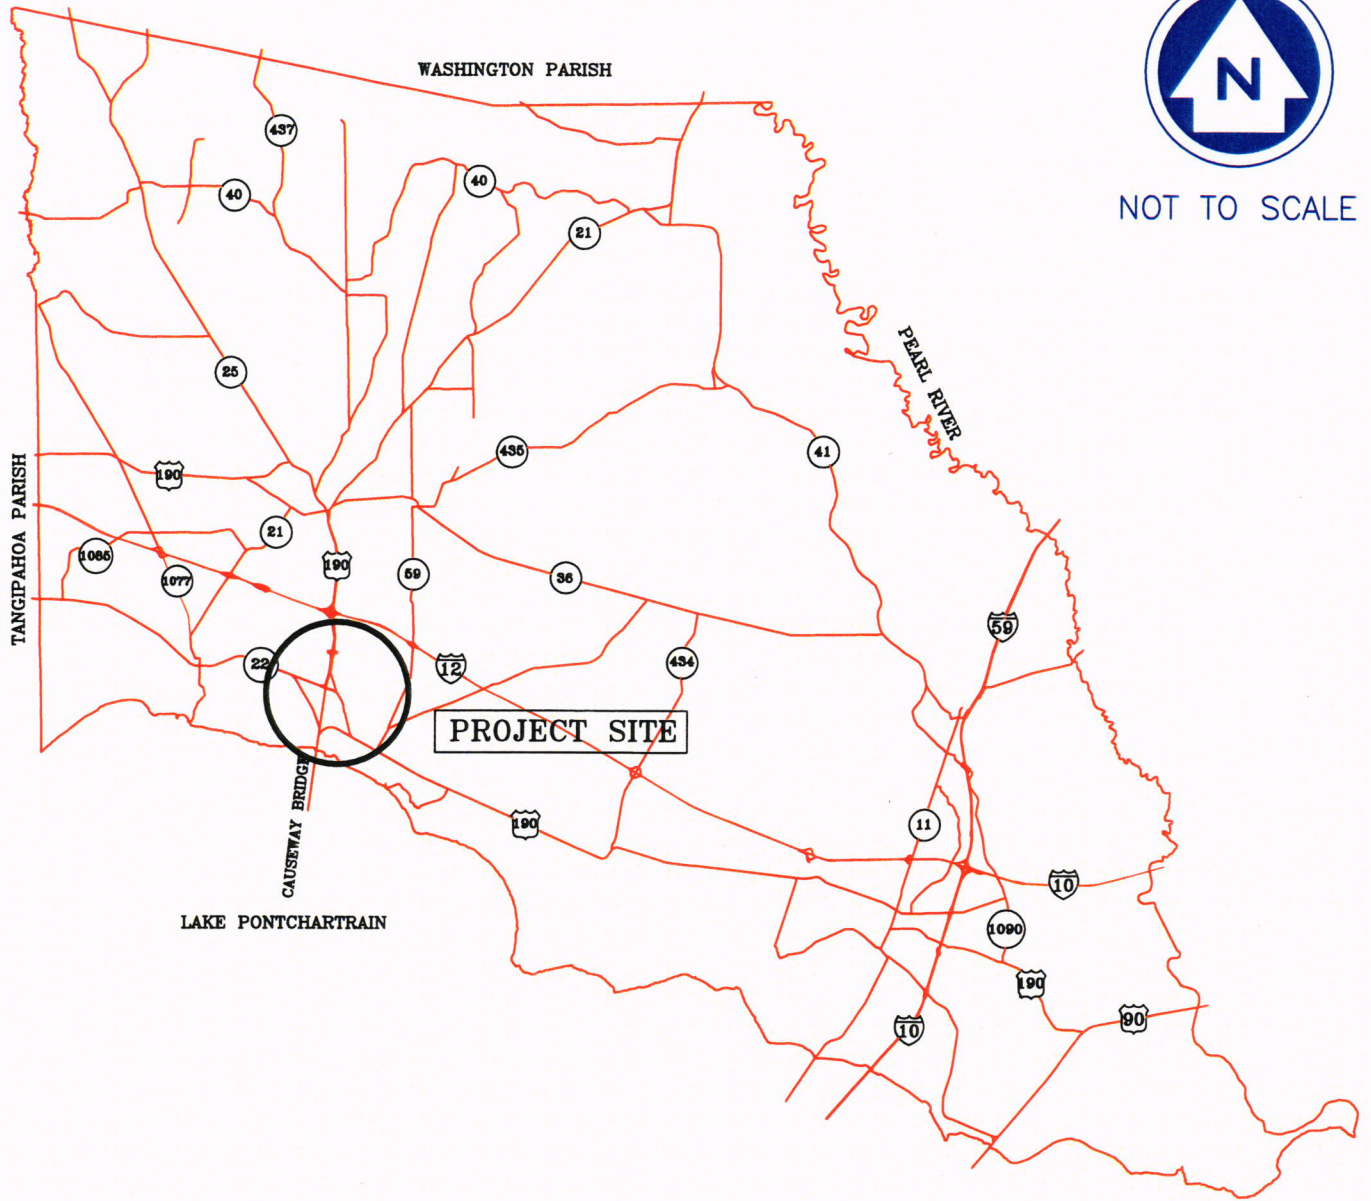

The proposed Brentwood Subdivision has a proposal of 102 single family residential lots. The project is located near the intersection of Sharp Rd. and Westwood Dr., along Sharp Rd. There will be one entrance to the development on Sharp Rd. The entrance will be a boulevard entrance with one inbound and two outbound lanes with an unsignalized stop sign control. We assume traffic leaving onto Sharp Rd. will be 70% right turns, west and 30% left turns, east.

### Project Traffic Generation Estimates

Trip generation estimates are based on *Trip Generation, 9<sup>th</sup> Edition* published by the Institute of Transportation Engineers. Land Use type 210, Single-Family Detached Housing, was used to determine the number of trips generated by the proposed development since it best represented the type use within the development. These numbers may vary due to other local factors that cannot be accounted for. **Table 1** lists the trips generated for the proposed 102 lot single-family detached housing subdivision.

**TABLE 1- Trips Generated by 102-lot Single-Family Detached Housing**

Trip Type	Entering	Exiting
Avg. Vehicle Trips on a Weekday	535	535
Avg. Vehicle Trips on a Weekday Peak Hour between 7 & 9 a.m.	20	61
Avg. Vehicle Trips on a Weekday Peak Hour between 4 & 6 p.m.	67	40
Avg. Vehicle Trips on a Weekday A.M. Peak Hour of Generator	22	62
Avg. Vehicle Trips on a Weekday P.M. Peak Hour of Generator	70	39
Avg. Vehicle Trips on a Saturday	517	517
Avg. Vehicle Trips on a Saturday Peak Hour of Generator	54	46
Avg. Vehicle Trips on a Sunday	440	440
Avg. Vehicle Trips on a Sunday Peak Hour of Generator	49	43

## EXISTING AND FUTURE TRAFFIC CONDITIONS

### Existing and Projected Future Traffic Volumes

The existing peak hour counts are used as the basis for all of the existing condition capacity analyses. The AM peak traffic count is 354 vehicles per hour (vph) on Sharp Rd., and the PM peak traffic count is 494 vph. The AM peak occurred from 7 to 8 am and the PM peak occurred from 5 to 6 pm. The peak hour volumes are a worst case scenario for roadways during AM and PM hours. The majority of the AM and PM hours have far less volumes than the peak hours. Summaries of the existing traffic are illustrated in **Figure 3**.

Referring back to Table 1, for the AM peak hour there are 84 trips estimated, 22 entering and 62 exiting. The PM peak hour has 109 trips estimated, 70 trips entering and 39 exiting.

Total traffic volumes at the study intersections are estimated for the project scenarios by combining existing traffic counts with anticipated future traffic growth. The future traffic growth accounts for traffic growth at the study intersections due to local and regional development other than the project. The future projected calculations are year 2017. We assume our project will take 1 year to “build-out”. We use a population growth of 3% per year taken from St. Tammany Engineering Department. Summaries of the existing traffic are illustrated in **Figure 4**, Brentwood Subdivision added trips are illustrated in **Figure 5**, and future traffic is illustrated in **Figure 6**.

### Capacity Analysis

In order to determine the effect that this development would have on the selected intersections, a capacity analysis was run for both the existing and future conditions. Capacity analyses were performed using the *Highway Capacity Manual (HCM)* procedures in the *HCS+* software.

The level of service (LOS) was first determined for the existing conditions at the peak AM & PM hours at the study intersections. The growth factor trips were combined to existing trips to evaluate the conditions in the future. The trips from Brentwood Subdivision were added to the growth factor trips to evaluate the future conditions.

**Sharp Rd. @ Hwy. 59**

The signalized controlled intersection was analyzed for the existing and future conditions. The four-way intersection contains signals in each direction. Northbound and Southbound on Sharp Rd. provides a dedicated left turn lane with a protected left turn arrow. Currently DOTD is studying the intersection and has plans for a roundabout. These improvements will help mitigate delays at the intersection. The following tables summarize the intersection:

**TABLE 2-Summary of intersection LOS- Sharp Rd. @ Hwy. 59 (AM Peak)**

	Without Project (Existing AM)		With Project (Future AM)	
	LOS	Delay	LOS	Delay
NB Hwy. 59	C	21.8s	C	22.5s
SB Hwy. 59	C	29.6s	C	31.5s
EB Sharp Rd.	D	41.4s	D	42.7s
WB Sharp Rd.	D	36.7s	D	36.8s

**TABLE 3-Summary of intersection LOS- Sharp Rd. @ Hwy. 59 (PM Peak)**

	Without Project (Existing PM)		With Project (Future PM)	
	LOS	Delay	LOS	Delay
NB Hwy. 59	C	25.4s	C	26.5s
SB Hwy. 59	D	42.1s	D	50.5s
EB Sharp Rd.	D	53.8s	D	54.0s
WB Sharp Rd.	D	36.7s	D	36.9s

**Sharp Rd. @ Asbury Dr.**

The signalized controlled intersection was analyzed for the existing and future conditions. The four-way intersection contains signals in each direction. Southbound on Asbury Dr. the signal contains a protected left turn arrow. The intersection has minimal delays both presently and with the projected conditions. No improvements are necessary. The following tables summarize the intersection:

**TABLE 4-Summary of intersection LOS- Sharp Rd. @ Asbury Dr. (AM Peak)**

	Without Project (Existing AM)		With Project (Future AM)	
	LOS	Delay	LOS	Delay
NB Asbury Dr.	C	20.0s	C	20.3s
SB Asbury Dr.	B	12.5s	B	12.7s
EB Desoto St.	B	17.1s	B	17.2s
WB Sharp Rd.	C	24.7s	C	29.3s

**TABLE 5-Summary of intersection LOS- Sharp Rd. @ Asbury Dr. (PM Peak)**

	Without Project (Existing PM)		With Project (Future PM)	
	LOS	Delay	LOS	Delay
NB Asbury Dr.	C	26.8s	C	31.1s
SB Asbury Dr.	B	14.1s	B	15.2s
EB Desoto St.	B	17.6s	B	17.8s
WB Sharp Rd.	C	21.1s	C	22.3s

**Sharp Rd. @ Entrance/Exit**

The stop sign controlled intersection was analyzed for the future conditions. The “T” intersection has one stop sign on the southbound exit. The main entrance will be a boulevard entrance with one inbound and two outbound lanes. Minimal delays are calculated with the projected conditions. The following table summarizes the intersection:

**TABLE 6-Summary of intersection LOS- Sharp Rd. @ Entrance/Exit**

	AM Peak		PM Peak	
	LOS	Delay	LOS	Delay
SB Exit	B	10.3s	B	10.8s
EB Sharp Rd.	A	7.7s	A	7.7s

## CONCLUSION

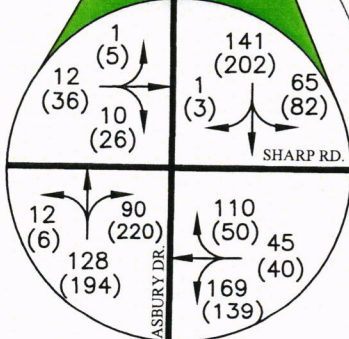

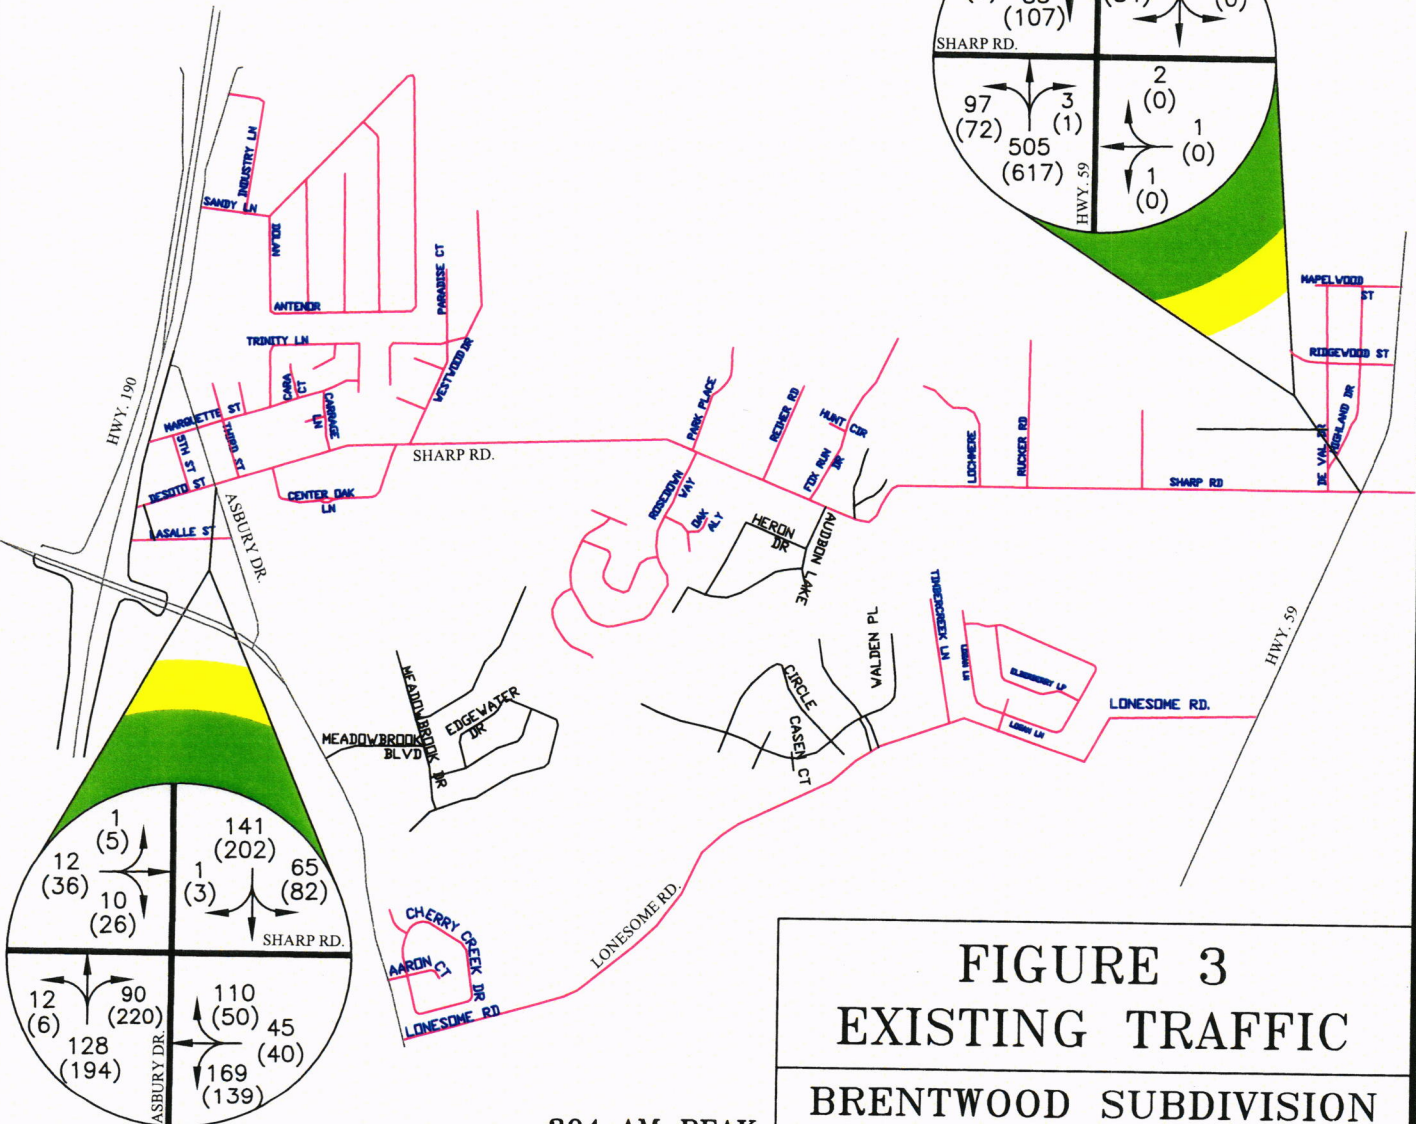

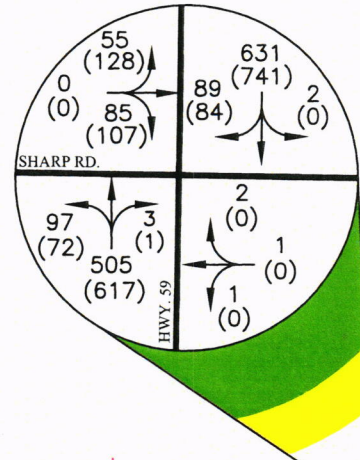

This report has looked at the impact of the proposed Brentwood Subdivision, a 102 lot, single family residential development located on Sharp Rd. The future calculations including future growth and this project are for the year 2017. The entrance to the development on Sharp Rd. has minimal delays for vehicles entering and exiting the site in future conditions. Turn lane warrants were run for the future conditions at the project entrance and Sharp Rd. The analysis shows that the project does not warrant turn lanes. The majority of intersections examined were acceptable with some delays in both present and future conditions.

We conclude that the proposed development adds minor delays and impact to the area. The analysis shows that the proposed development does not reduce the levels of service of the roadways past Parish standards to require any improvements. Keep in mind the peak hour volumes are a worst case scenario for the roadways that were evaluated. The majority of the AM and PM hours have far less volumes than the peak hour. The analysis shows minor impacts to the local roadways by this development.

 PROJECT NO.: 16-035

**LEGAL DESCRIPTION**

Being a certain parcel of ground situated in Section 27, Township 36N, Range 11E, Government of the State of Louisiana, known as Section 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 202, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 215, 216, 217, 218, 219, 220, 221, 222, 223, 224, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 899, 900, 901, 902, 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914, 915, 916, 917, 918, 919, 920, 921, 922, 923, 924, 925, 926, 927, 928, 929, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992, 993, 994, 995, 996, 997, 998, 999, 1000.

### Trip Generation

Single-Family Detached Housing (210)  
Average Vehicle Trips vs. Dwelling Units

Job: Brentwood  
Calculated By: MJM  
Date: 5/22/2016

Lots: 102

T = trips generated            X = # of dwellings

Weekday:

$$\ln(T) = 0.92 \ln(X) + 2.72 \qquad T = 1070$$

Entering = 50% = 535  
Exiting = 50% = 535

Weekday, Peak Hour of Adjacent Street Traffic, One Hour Between 7 & 9 a.m.:

$$T = 0.70(X) + 9.74 \qquad T = 81$$

Entering = 25% = 20  
Exiting = 75% = 61

Weekday, Peak Hour of Adjacent Street Traffic, One Hour Between 4 & 6 p.m.:

$$\ln(T) = 0.90 \ln(X) + 0.51 \qquad T = 107$$

Entering = 63% = 67  
Exiting = 37% = 40

Weekday, A.M. Peak Hour of Generator:

$$T = 0.70(X) + 12.12 \qquad T = 84$$

Entering = 26% = 22  
Exiting = 74% = 62

Weekday, P.M. Peak Hour of Generator:

$$\ln(T) = 0.88 \ln(X) + 0.62 \qquad T = 109$$

Entering = 64% = 70  
Exiting = 36% = 39

Saturday:

$$\ln(T) = 0.93 \ln(X) + 2.64$$

$$T = 1034$$

$$\text{Entering} = 50\% = 517$$

$$\text{Exiting} = 50\% = 517$$

Saturday, Peak Hour of Generator

$$T = 0.89(X) + 8.77$$

$$T = 100$$

$$\text{Entering} = 54\% = 54$$

$$\text{Exiting} = 46\% = 46$$

Sunday:

$$T = 8.63(X) - 0.63$$

$$T = 880$$

$$\text{Entering} = 50\% = 440$$

$$\text{Exiting} = 50\% = 440$$

Sunday, Peak Hour of Generator:

$$\ln(T) = 0.91 \ln(X) + 0.31$$

$$T = 92$$

$$\text{Entering} = 53\% = 49$$

$$\text{Exiting} = 47\% = 43$$

## Level-Of-Service Criteria

*LOS A* describes operations with very low control delay, up to 10 sec per vehicle. This level of service occurs when progression is extremely favorable and most vehicles arrive during the green phase. Most vehicles do not stop at all. Short cycle lengths may also contribute to low delay.

*LOS B* describes operations with control delay greater than 10 and up to 20 sec per vehicle. This level generally occurs with good progression, short cycle lengths, or both. More vehicles stop than with *LOS A*, causing higher levels of average delay.

*LOS C* describes operations with control delay greater than 20 and up to 35 sec per vehicle. These higher delays may result from fair progression, longer cycle lengths, or both. Individual cycle failures may begin to appear at this level. The number of vehicles stopping is significant at this level, though many still pass through the intersection without stopping.

*LOS D* describes operations with control delay greater than 35 and up to 55 sec per vehicle. At level *D*, the influence of congestion becomes more noticeable. Longer delays may result from some combination of unfavorable progression, long cycle lengths, or high *v/c* ratios. Many vehicles stop, and the proportion of vehicles not stopping declines. Individual cycle failures are noticeable.

*LOS E* describes operations with control delay greater than 55 and up to 80 sec per vehicle. This level is considered by many agencies to be the limit of acceptable delay. These high delay values generally indicate poor progression, long cycle lengths, and high *v/c* ratios. Individual cycle failures are frequent occurrences.

*LOS F* describes operations with control delay in excess of 80 sec per vehicle. This level, considered to be unacceptable to most drivers, often occurs with over-saturation, that is, when arrival flow rates exceed the capacity of the intersection. It may also occur at high *v/c* ratios below 1.0 with many individual cycle failures. Poor progression and long cycle lengths may also be major contributing factors to such delay levels.

## Levels-of-Service for Signalized Intersections<sup>2</sup>

Level of service for signalized intersections is defined in terms of delay, which is a measure of driver discomfort, frustration, fuel consumption, and lost travel time. The delay experienced by a motorist is made up of a number of factors that relate to control, geometrics, traffic, and incidents. Total delay is the difference between the travel time actually experienced and the reference travel time that would result during ideal conditions: in the absence of traffic control, in the absence of geometric delay, in the absence of any incidents, and when there are no other vehicles on the road. For signalized intersections only the portion of total delay attributed to the control facility is qualified. This delay is called *control delay*. Control delay includes initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay. Control delay may also be referred to as signal delay.

Specifically, LOS criteria for traffic signals are stated in terms of the average control delay per vehicle, typically for a 15-minute analysis period. The criteria are given below.

LEVEL-OF-SERVICE CRITERIA FOR SIGNALIZED INTERSECTIONS	
Level of Service	Control Delay per Vehicle (sec)
A	$\leq 10$
B	$> 10$ and $\leq 20$
C	$> 20$ and $\leq 35$
D	$> 35$ and $\leq 55$
E	$> 55$ and $\leq 80$
F	$> 80$

<sup>2</sup> Source: *Highway Capacity Manual – Special Report 209*, Transportation Research Board, updated 12/97.

## Levels-of-Service for Unsignalized (TWSC) Intersections<sup>1</sup>

The level of service for a two-way stop-control (TWSC) intersection is determined by the computed or measured control delay and is defined for each minor movement. Level of service is not defined for the intersection as a whole. LOS criteria are given below:

LEVEL-OF-SERVICE CRITERIA FOR TWSC INTERSECTIONS	
Level of Service	Control Delay per Vehicle (sec)
A	$\leq 10$
B	$> 10 \text{ and } \leq 15$
C	$> 15 \text{ and } \leq 25$
D	$> 25 \text{ and } \leq 35$
E	$> 35 \text{ and } \leq 50$
F	$> 50$

Average control delay less than 10 sec per vehicle is defined as LOS A. Follow-up times of less than 5 sec per vehicle have been measured when there is no conflicting traffic for a minor-street movement, so control delays of less than 10 sec per vehicle are appropriate for low flow conditions.

The LOS criteria for TWSC intersections are somewhat different than the criteria for signalized intersections. The primary reason for this difference is that drivers expect different levels of performance from different kinds of transportation facilities. The expectation is that a signalized intersection would be designed to carry higher traffic volumes than an unsignalized intersection. In addition, a number of driver behavior considerations combine to make delays at signalized intersections less onerous than delays at unsignalized intersections. For example, drivers at signalized intersections are able to relax during the red interval, whereas drivers on the minor approaches to unsignalized intersections must remain attentive to the task of identifying acceptable gaps and vehicle conflicts. Also, there is often much more variability in the amount of delay

<sup>1</sup> Source: *Highway Capacity Manual - Special Report 209*, Transportation Research Board, updated 12/97.

experienced by individual drivers at an unsignalized intersection versus that at signalized intersections. For these reasons, it is considered that the control delay threshold for any given level would be less for an unsignalized intersection than it would be for a signalized intersection.

Appendix C  
“Future Conditions”  
Capacity Calculations

Figure 2 - 6. Guideline for determining the need for a major-road right-turn bay at a two-way stop-controlled intersection.

SHARP RD. & ENT/EXIT - FUTURE AM  
 INPUT

Roadway geometry:	2-lane roadway
Variable	Value
Major-road speed, mph:	35
Major-road volume (one direction), veh/h:	199
Right-turn volume, veh/h:	7

OUTPUT

Variable	Value
Limiting right-turn volume, veh/h:	5858
<b>Guidance for determining the need for a major-road right-turn bay for a 2-lane roadway:</b>	
<b>Do NOT add right-turn bay.</b>	

Figure 2 - 6. Guideline for determining the need for a major-road right-turn bay at a two-way stop-controlled intersection.

SHARP RD. @ ENT/EXIT - FUTURE PM  
INPUT

Roadway geometry:	2-lane roadway
Variable	Value
Major-road speed, mph:	35
Major-road volume (one direction), veh/h:	181
Right-turn volume, veh/h:	21

OUTPUT

Variable	Value
Limiting right-turn volume, veh/h:	8270
<b>Guidance for determining the need for a major-road right-turn bay for a 2-lane roadway:</b>	
<b>Do NOT add right-turn bay.</b>	

Figure 2 - 5. Guideline for determining the need for a major-road left-turn bay at a two-way stop-controlled intersection.

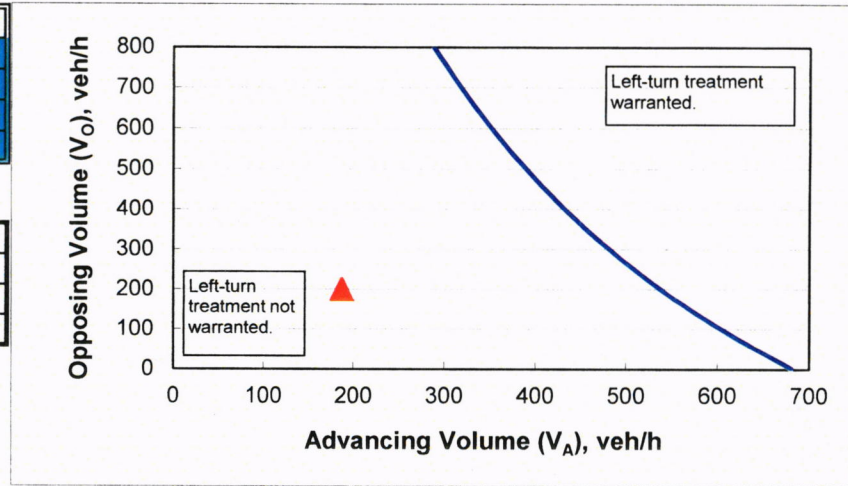

SHARP RD. @ ENT/EXIT - FUTURE AM  
2-lane roadway (English)

INPUT

Variable	Value
85 <sup>th</sup> percentile speed, mph:	35
Percent of left-turns in advancing volume ( $V_A$ ), %:	8%
Advancing volume ( $V_A$ ), veh/h:	187
Opposing volume ( $V_O$ ), veh/h:	199

OUTPUT

Variable	Value
Limiting advancing volume ( $V_A$ ), veh/h:	537
<b>Guidance for determining the need for a major-road left-turn bay:</b>	
<b>Left-turn treatment NOT warranted.</b>	

CALIBRATION CONSTANTS

Variable	Value
Average time for making left-turn, s:	3.0
Critical headway, s:	5.0
Average time for left-turn vehicle to clear the advancing lane, s:	1.9

Figure 2 - 5. Guideline for determining the need for a major-road left-turn bay at a two-way stop-controlled intersection.

SWARP RD. @ ENT/EXIT - FUTURE PM  
2-lane roadway (English)

INPUT

Variable	Value
85 <sup>th</sup> percentile speed, mph:	35
Percent of left-turns in advancing volume ( $V_A$ ), %:	12%
Advancing volume ( $V_A$ ), veh/h:	397
Opposing volume ( $V_O$ ), veh/h:	181

OUTPUT

Variable	Value
Limiting advancing volume ( $V_A$ ), veh/h:	458
<b>Guidance for determining the need for a major-road left-turn bay:</b>	
<b>Left-turn treatment NOT warranted.</b>	

CALIBRATION CONSTANTS

Variable	Value
Average time for making left-turn, s:	3.0
Critical headway, s:	5.0
Average time for left-turn vehicle to clear the advancing lane, s:	1.9
